

# AVIATION HEALTH IN AIRPORTS

## INDEPENDENT AUDIT AND ASSESSMENT

The ongoing COVID-19 Pandemic has had a significant impact on the aviation industry and airport operations in particular. As the industry starts preparing for a long and progressive recovery, airport operators (and the aviation industry as a whole) are faced with a new set of regulatory requirements and guidelines: Aviation Health.

airportQM has developed a comprehensive methodology for the audit and assessment of whether Aviation Health measures have been introduced in an effective manner, comply with the evolving regulatory requirements and whether further opportunities could be considered based on industry best practice. Effectively, this service enables airports to gain independent and external feedback on their Aviation Health performance and gain insights on potential improvement tailor-made to their operations.

The airportQM | Modalis team has developed its audit and assessment protocol based on over 25 years of practical hands-on experience in the airport industry. Our methodology combines experience in delivering ISO 19011:2018 formal audits and experience-based, best industry practice assessments with an in-depth understanding of recent regulatory and operational COVID-19 driven requirements. Our audit teams combine formal auditing qualifications with hands-on airport operation experience - to provide practical and deliverable recommendations that are tailor-made to each airport client. Aviation Health audit & assessments are typically completed within 3 weeks of contract award.
